

Fully Transferable Hard Drive Kit
Manages Your Data

The **ST1000** is a cost-effective hard drive solution that enables you to transfer hard drives between Stardom units with the click of a tray. It is a compact internal unit that fits into any 5.25" drive bay, whether on a tower or in a rackmount chassis. It features both a 3.5" hot-swappable tray for data management and easy storage capacity expansion, and a 2.5" HDD tray where you can store your operating system or other applications.

With **ST1000**, you can freely backup and manage your most important data across the STARDOM product series. Its hot-swappable tray design ensures platform stability and lowers the total cost of your data management system.

Two Drive Bays Serve Two Needs

Data Mobility Made Easy

Tray module fits a range of STARDOM models, which enables you to exchange and manage data between different working spaces, such as your server room and office. If you require data mobility, these are your storage units.
